

1. Name of Practicum: Static HTML Webpage**2. Procedure (Say)**

1. Begin with a standard HTML5 structure.
2. Use <h1>, <p>, , and tags to display personal details and an image.
3. Use <a> tags to simulate website and social media links.
4. Use headings and paragraphs to format text.
5. Use the <table> tag with <tr>, <th>, and <td> elements.
6. Use an ordered list () to present technical skills.
7. Use an unordered list () for general items.
8. Complete and save the document.

3. Actual Resources Used (Say)

Resources	Tool & Version
Operating System	Macos 15.6 Sequoia
Programming Language	HTML (Markup Language)
Software Development Kit	Not Applicable
Libraries	Not Applicable
Graphics/Animation Tool	Not Applicable
Front-end Tool	1.VS Code (v 1.103.1) 2. Google Chrome (v 139.0.7258.67)
Back-end Tool	Not Applicable
Virtual Lab	Not Applicable
Specific Hardware	Not Applicable

Simulation/Emulation	Not Applicable
----------------------	----------------

4. Actual Procedure Followed:

Planning & Requirements Gathering

- Identified the purpose of the webpage
- Listed the required features.
- Chose the theme, layout style, and color scheme.

Setting Up the Development Environment:

- Installed/used a code editor (VS Code).
- Created a project folder and subfolders for HTML and images.

Designing the Structure:

- Wrote the basic HTML skeleton.
- Added headings, paragraphs, images, and hyperlinks as per the design.

Testing & Debugging

- Opened the webpage in multiple browsers (Chrome, Edge, etc.) to check compatibility.
- Fixed layout issues and corrected broken links or missing images.

Finalizing & Deployment

- Reviewed the webpage for errors and typos.
- Saved and organized all files in the correct folders.
- The Tags used for the forms .

5. Observations:

- Different tags were used to give different output and perform different tasks in html document.
- These pages source code has been verified by <https://validator.w3.org/> and found errors of CSS not being used.
- Noticed how different tags rendered on the webpage.
- `<td>` displayed table data, while `<th>` emphasized header content with bold styling.
- Changing the type attribute in the ordered list (``) affected the numbering style (e.g., numeric, alphabetic, Roman numerals).
- The `<head>` section is used for metadata, title, and linking styles/scripts, while the `<body>` contains visible content.
- Semantic tags like `<header>`, `<nav>`, `<section>`, and `<footer>` improve readability and accessibility.
- Lists (``, ``, ``) help in presenting information in an organized manner.
- The main thing of this practicum is adding tags to the webpage and it shows perfectly.

6. Source Code:

<h1 class="white"><center><ins>Chicken Fry </ins></center></h1>

<div class="recipe-grid">

<div class="recipe-content" class="white">

<h3><ins>Ingredients:</ins></h3>

500g chicken pieces

1 cup buttermilk

1 cup all-purpose flour

1 tsp paprika

1 tsp garlic powder

Salt and pepper to taste

Oil for frying

<h3><ins>Instructions:</ins></h3>

Marinate the chicken in buttermilk for at least 1 hour.

In a bowl, mix flour, paprika, garlic powder, salt, and pepper.

Heat oil in a deep fryer or large skillet.

Dredge the marinated chicken in the flour mixture.

Fry the chicken until golden brown and cooked through, about 10-12

minutes.

Drain on paper towels and serve hot.

TC002	Recipe Links	Checking if the recipe links are working or not.	Page scrolls/ jumps to Chicken Fry section	Page scrolls/ jumps to Chicken Fry section	Yes	Pass	
TC003	Unordered List	Check the ordered list and check if the things are organized	Check "List of Products"	All items display with bullet points	Yes	Pass	
TC004	Image Display	Check whether the image is provided	View recipe images (e.g., Gulab Jamun, Mango Lassi)	Images load correctly or alt text shown	Yes	Pass	

TC005	Video Display	Check whether the Video is displayed.	Check the Videos is working	Video displayed in correct size and manner	Yes	Pass	
TC006	Videos from Youtube	Check the Youtube video list	Check <iframe> section	Links from the YouTube are directly pasted.	Yes	Pass	
TC007	Text Emphasises	Check the basic word highlights	Verify <mark> and <u> usage	Highlighted text visible	Yes	Pass	
TC008	Contact Links	Check the contact links and mail links are working	Click "Mail me" "Call me" icon	Opens email app And phone log.	Yes	Pass	
TC009	Validation	Check whether the html code have some error	Validate in W3C	No critical errors	Yes	Pass	

8. Results:

- The required webpages
 - ii. Demo page for Gridf.
 - iii. Mom'skitchen Grid.
 - iv. Karunya Grid
- The ordered list was chosen to present technical skills in a structured, ranked format.
- Successfully created a functional webpage using appropriate HTML tags.
- Correctly applied tags for headings, paragraphs, images, links, tables, and lists.
- Maintained proper HTML structure with `<!DOCTYPE>`, `<html>`, `<head>`, and `<body>` tags.
- Used CSS to give life to the webpages.
- Validated the webpage using W3C HTML Validator with no major errors.
- Successfully added Video and Audio tags to the code.

9. INTERPRETATION OF RESULTS:

•Grid Demo:

This website contains the guidance of basic CSS elements.

•MoM's Kitchen:

This webpages consists of 3 recipes of my favorite which my Mumma makes for me with Video for Guidance with CSS added to make it look awesome.

10. CONCLUSION:

- Successfully created and tested a functional webpage using HTML.
- Understood the role and usage of different HTML tags.
- Ensured the webpage was W3C standard-compliant after validation.
- Learned the importance of clean and properly structured code.
- Gained hands-on experience in basic web development practice
- Used CSS to give life to the webpages.
